

COMPANY OVERVIEW

Hitachi Vantara Federal

Hitachi Vantara Federal is the trusted leader in mission-centric data solutions. We are dedicated to providing the solutions and support federal agencies need today, and in the future. We power digital transformation from the core to the edge, offering a full-service experience for integrated digital solutions spanning the entire data fabric from storage, to enrichment, to action. Balancing a century of tradition with constant innovation, we stand for trust, agility, and excellence.

Data-Driven.

We live and breathe data. As a leader in mission-critical digital infrastructure, we know the importance of having data in the right place, at the right time, all the time. We help customers simplify, scale, and securely manage data across their hybrid and multicloud environments – and easily bring data to life from edge to core to cloud.

Mission-Centric.

We were made for federal missions. At the core of our work is intimate collaboration with customers and partners to design, deliver, and support the digital solutions tailored specifically to address their mission needs. Our dedicated US federal support center operates 24x7x365 to ensure mission-critical operations go uninterrupted. Mission owners across civilian, defense, and intelligence agencies rely on our deep bench of cleared technical resources to power (and empower) their most sensitive data.

Future-Focused.

We can't predict the future, but we can be ready for it. Hitachi has spent over a century solving society's biggest challenges and we have no intention of stopping. We continue to innovate and deliver meaningful digital transformation for the US federal government, improving the security and well-being of our nation.
